

Deep work. Zero missed prayers.

Prayer times live in your desktop tray —
so your phone can stay face-down.

Today's times for your mosque — next prayer on countdown.

Your prayer reminder lives in the noisiest place you own.

- **One glance becomes twenty minutes.**

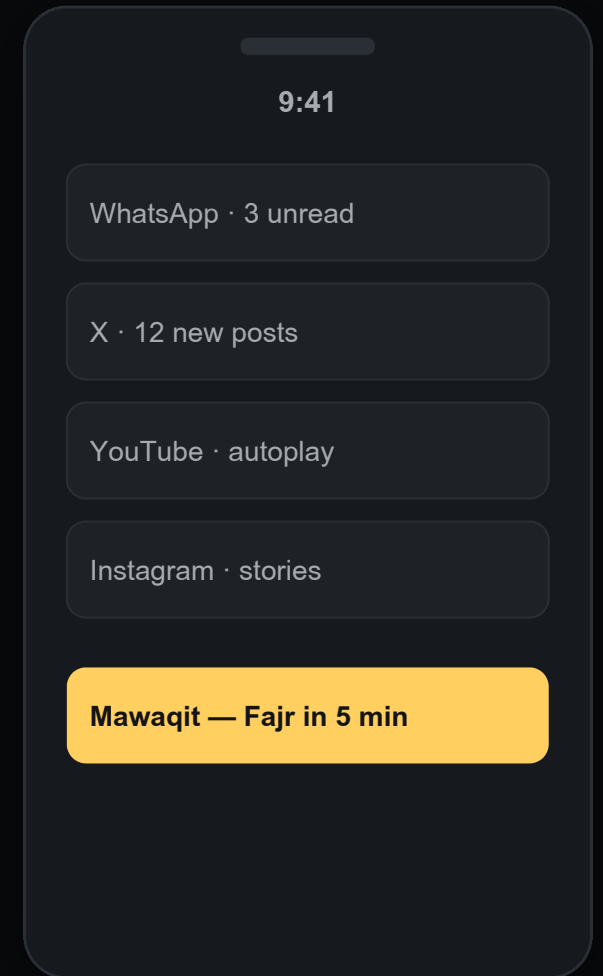

Checking the next prayer time means picking up the phone — and the phone has other plans.

- **Silence it, and the adhan is gone.**

A phone on Do Not Disturb swallows the one call that actually matters.

- **Focus pays the bill.**

Every unlock is a context switch your deep work didn't ask for.

The one alert you need, drowned by the rest.

Prayer times belong where the work happens.

mawaqit-desktop sits in your system tray and calls the adhan at prayer time — no dock, no tab, no phone screen ever turned on.

Live tray countdown — orange under 10 min, red under 5.

05:12

23:25

your tray

From mosque search to adhan — in three steps.

1

Find your mosque

One search across the mawaqit.net mosque directory. No account, no API key, no setup wizard.

→ 2

Your tray learns the times

Today's schedule lands in the tray with a live countdown to the next prayer — iqama included if you want it.

→ 3

Get called to prayer

At prayer time you get a desktop notification and the adhan — or a quiet heads-up, your choice per prayer.

Times refresh automatically every day — DST, calendar layouts and iqama offsets handled.

Each prayer, its own rules.

- **A mode per prayer**

Silent for a quiet popup, Default for a standard one, Adhan for the full call — independently per prayer.

- **Your sound, your volume**

Use the built-in athan or any mp3/wav on your disk, with per-prayer volume from 0 to 100.

- **One heads-up, on time**

Notify before 1–30 minutes — exactly one reminder, never a countdown spam.

- **Shurouq & bulk edit**

Optional pre-sunrise reminder, and one click to apply a prayer's settings to all five.

Set this for every prayer

The notifications panel

Small things that make it stick.

Countdown tray icon

The badge shifts green, orange, red as the next prayer approaches.

Month calendar

The full adhan & iqama table for the month, today highlighted.

Iqama alerts

An optional heads-up when each iqama starts.

Starts at login

Boots minimized to the tray — it never opens itself in your way.

Shurouq reminder

One notification before sunrise, for those who fast.

Stop the athan

Click the notification or the tray item to silence it instantly.

Nothing to sign up for. Nothing tracking you.

accounts

0

API keys

0

ads & trackers

Keyless access to public mosque data. Your settings live in a local file —
nothing leaves your machine, and there is no server of ours to leak.

Light on your machine.

~25 MB

installed footprint. Built with Tauri 2 and Rust — not Electron. It starts at login and you never notice it until it's time to pray.

Windows

MSI & NSIS installers

macOS

Intel & Apple Silicon (universal)

Linux

deb · rpm · AppImage · Raspberry Pi 5

Same tray behavior on every platform — autostart, notifications, adhan playback.

Built for people who leave the phone in another room.

Deep workers

Protect the flow state without losing the prayer clock — no unlocks, no feeds, no rabbit holes.

Remote workers & devs

The machine you already stare at becomes the one that calls you to prayer.

Students

Long study sessions that respect salah — reminders arrive, reels don't.

If your phone stays in another room, your prayer times shouldn't live on it.

Keep the phone down.
Never miss a prayer.
